

QUAGMIRE IN THE GREAT CLEPSYDRA

A Rultmoork adventure
for 1st-level heroes.

GM Introduction

This one-shot Mini-Dungeon casts the players in the roles of the cultists of the Church of Still Waters, and tells the tale of how their prophet, **Arios the First**, came to hold a *tear of Vasi*. It can be run as a prelude to **Rultmoork**, as an optional, second **Vision of the Past**, or as a stand-alone adventure that explores how the curious heresy came to be.

The module is presented from the perspective of deeply traumatized individuals who have found a twisted kind of solace in *stagnation*.

The players take control of these cultists—all 14 of them. They only control up to six cultists at a given time in combat, but ultimately have 14 at their disposal.

A player chooses which of the three cultist types they wish to control, although a group of players can't choose more than 5 cultists of a single type during this adventure.

Cultists are not as powerful as adventurers; as such, clever roleplay is required to triumph in this adventure.

It should be noted that the death of multiple cultists is extremely likely.

The challenge of this adventure is in using weak individuals and ingenuity to accomplish extraordinary things.

GM Considerations

Fragile Life. Cultists are not mighty heroes. The cultists do not have a death save, though tough cultists have the Hardy feature; cultists automatically die at the end of the round if reduced to 0 hit points and not healed. Convey this to the players when it inevitably comes up.

Inventory Slots. This scenario uses a simplified inventory system. Each cultist has a fixed amount of inventory slots, as noted in their stats. The cultists' starting equipment does not fill up inventory slots, but any excess item they carry occupies one of these slots.

Pawns & Tokens Required. You need the pawns for **14 cultists of the Church of Still Waters**, **15 stagnant dead** in flow mode to represent the lesser flowing dead, **one swarm of Vasi's drops** in flow mode, **one flow conductor** in flow mode, and **one flow weaver** in flow mode. **Mer'talya** can act as a replacement cultist in chapter two.

You need **six green tokens of Vasi**; you need **42 tokens to represent Salvage and Food**; you need **1d20 set aside** that can act as the *Ritual Die* in Chapter 1, Act III.

Scoring. This module has a tournament angle; take note of the party's overall performance by tallying the points they manage to score. The respective scenes denote actions that award points in the respective Scoring section. Additionally, you can consult Appendix III: Scoring Sheet.

Story Synopsis

When Arios opened the doors to the Water Clock Level of Rultmoork, he inadvertently also called an insane **flow weaver**, an elemental servant of Vasi goddess of fresh water. The elemental was driven mad by the heresy of *stagnation* that has claimed Rultmoork yet remains not entirely corrupted. The elemental tries to restart the rivers that were once powered by the magic of the Great Clepsydra, the water clock that the characters are about to explore. The Great Clepsydra was once powered by two *tears of Vasi*: One of these divine tears is lost in the depths of Rultmoork, whereas the other still remains here, oscillating between its original purity, and the *tainted* heresy of *stagnation* that suffuses the spire of Rultmoork.

The twisted ideology of Arios has caught the interest of Ylluliav Vleckmar, the apostate high priestess at the heart of Rultmoork's corruption. As she slowly attempts to reach out and grants Arios powers fueled by her heresy, Vasi's servants notice. The deity's servants attempt to scare the cultists away, but when they refuse to heed the warnings, they, under the command of the flow weaver, attempt to scour the cultists from the spire with a magical rainstorm of epic proportions.

Meanwhile, the **flow weaver** is using its powers to control water, as well as its attunement to a relic, the *sacred amphora of restoration*, to attempt to restart the Great Clepsydra. Meanwhile, Ylluliav, the source of the spire's heresy has contacted **Arios** (who mistook the voice for Vasi), granting his wretched flock her dark blessing.

The characters, having just returned from a scavenging run to prepare against the storm, first need to defeat Vasi's agents and then defend Arios, as he performs a ritual to quell the storm.

Provided they live through the grueling ordeal, they all receive one **green** token of Vasi, a crystallized representation

Arios the First
ᄒᄒᄒᄒᄒᄒ ᄒᄒᄒᄒᄒᄒ

of the stagnation heresy, and embark into the Great Celpsydra to stop the elemental and secure the remaining tear of Vasi, winning true immortality in blessed stagnation if they succeed.

The Weaver's Agenda

The **flow weaver** senses that Rultmoork is at a tipping point; the *tear of Vasi* already oscillates between its natural state of flow, and heretical stagnation. The heresy has already diminished the flow of water from **Area 5**. Meanwhile the weaver futilely tries to reactivate the Great Celpsydra's cleansing powers by using the *sacred amphora of restoration* and its own lifeforce to power **Area 4**, diminishing its prowess significantly. The weaver's attempts are doomed to fail, but it tries, nonetheless.

Chapter One: Storm of the Century

The parched earth of the plains below the ochre mountaintops becomes increasingly incapable of absorbing the water masses spring brings, and you have seen all you ever held dear crushed by the catastrophic onslaught of water.

War and torrential meltwater floods forced you to flee to the top of the cursed, grey-white mottled spire of Rultmoork, only to find a wise hermit named Arios among the ruins. Arios taught you what should, according to your rugged upbringing among the Baevonian mountains, be impossible: To survive, albeit frostbitten and disease-ravaged, atop the wind-blasted top of the spire, with nary a ruined wall for shelter. You subsist on a diet of insects and bitter berries, but the accursed reputation of the spire keeps the horrors of the outside world at bay.

All the while, a set of stairs leading a few steps down to a metal door inscribed with strange glyphs, right at the center of the wind-scoured ruins, remained a constant reminder of the spire's yet undiscovered secrets.

One day, Arios made a curious discovery amid the short, winding paths in the spire's South: a medallion of strange, bronze metal with blue flecks, lost among the sparse shrubbery. On the amulet's moving discs were the selfsame runes you had seen on the door.

Arios, his wisdom and mental acuity unmatched among your ragged band of survivors, managed to open the door on a particularly stormy afternoon, but before any of you could venture down the stairs, the wretched waters falling from the skies congealed in the shape

of a strange, spider-like entity the size of a grown warhorse. The spider made of water also manifested armor plates and a strange, silvery amphora.

The arachnid thing attacked any who dared stand in its way and ventured below. Ever since it arrived, the frightful sound of flowing water echoes from the depths; the pools of stagnant water that you need to survive have dried up, drawn below by the spider-thing's magic. Even the hardy plants providing your bitter berries are withering, and your sustenance-insects are deprived of their breeding grounds.

Last night, Arios had a vision: Vasi, goddess of water, has spoken to him from within the spire, revealing the truth of her gospel. Your salvation lies in her still waters; the flow must be quenched once more, the divine tear that rests below recovered and secured.

Arios received spherical green tokens as a sign of divine favor. He chose you to execute the goddesses will: "Secure the tear." He handed one of the round tokens to each of you, and when you touched the green, clammy surfaces, the exhaustion, the hypothermia and pain, the desperation — your constant companions in your miserable exile — ceased, replaced with a serene calmness and determination as still as a stagnant pool of water. You understood then that the spider-thing must be stopped, and that the green tokens can help you; thus fortified, you ventured down the stairs.

Act I: Welcome Committee

Player Character Starting Positions. The cultists start on the bridge, at the very edge of the map.

Flowing Dead Starting Positions. There is one lesser flowing dead for every two player-controlled cultists, rounded down. They emerge from the spire on the spots designated F on the map.

Flowing Dead Strategy. The flowing dead attempt to eliminate the cultists by any means necessary, including attempting to grab them and dive off the spire, if hard-pressed. However, they instinctively attempt to avoid losing hit points to their Stagnation Vulnerability, prioritizing movement over more advantageous tactical positioning. Perceptive players may notice the weird behavior of the undead and exploit it by immobilizing the undead, tripping them, etc.

Terrain. A creature that moves off the bridge or off grassy squares of the spire risks falling down. It takes the cultists only a DC 15 Dexterity saving throw to grab a ledge due to their familiarity with the

terrain; other creatures must succeed on a DC 20 Dexterity saving throw. On a failed save, the creature falls thousands of feet to an untimely death.

Treasure. Each lesser flowing dead leaves behind a greater battle aspergillum. Each such item takes up one inventory slot.

Troubleshooting.

- If the party does not seem to notice the strange movement patterns, allow them a **DC 10 Intelligence check** to deduce that the undead seem to need to move.
- If a cultist attempts to run off the map, they are blown unceremoniously off the bridge by a gust of wind.
- If the party only attacks the undead, wait for the end of the second round and remind them of the option to Shove and Grapple enemies, or share the D&D actions sheet.

Cultist Replacement. If a cultist perishes, a replacement cultist makes their way through the raging gales, arriving at the start of the next round.

Scoring.

For every cultist that survives of the total 14 cultists, the players gain **1 point**.

If the party can deduce the undead's weakness to inertia (Stagnation Vulnerability) without requiring a check, award **2 points**.

Every instance of clever roleplay or combat strategy to eliminate an undead, such as by pushing it off the spire, tripping them, etc., award 2 points. Only reward these points if the party did not require a hint.

As the last of the undead falls, the winds intensify behind you and your compatriots arrive, staggering through the intensifying gales. You hurry to your prophet.

Act II: Storm Incoming

Arios faces you with love and concern visible in his emaciated face. "Blessed be the still waters! I fear that dark forces seek to scour us from the spire, but despair not! I have been in mystic communion with the forces of permanence. I know how to stop this storm!"

Once the storm's rage is unleashed upon us, we shall start a rite that cloaks us in a cocoon of constancy; from within, I can enact the rite of the Eye of Constancy, sheltering us from the storm.

Alas, the horrid forces that attacked you will be sure to fall upon us and attempt to interrupt my invocation. I need six brave volunteers to defend the rest of us performing the rite and brave the wrath of the storm. Fear not: The rite will grant you, my faithful flock, additional powers; our fires shall serve as beacons for our might."

Let the players decide which cultists will remain outside of the cocoon, and which join Arios (for now, see Cultist Replacement).

The prophet clears his throat: My friends, please tell me what you have brought with you. I trust in your wisdom. We have eight hours until the storm truly reaches us. I will start my preparations for the rite and trust in your expertise; you may want to create our sacred sludge and fortify the ruins and yourselves against intruders and the elements—extreme gales, downpours, lightning, thunder... Any excess material you salvaged can be put into the barrel and chest.

The players have 8 hours to fortify the ruins against the incoming storm. Note that all surviving cultists can contribute here, including the replacement cultists.

Tell the players that each surviving cultist has managed to come here with **3 units of stock**, an abstract measurement of a variety of things they salvaged. We are using a modification of the rules from the *Survivalist's Guide to Spelunking*. Ask each player to **assign one of two roles to each unit of stock** their cultists have. As there are 14 cultists with three units per cultist, they should have 42 units of stock, minus those of cultists that fell off the spire. The two roles are:

- **Food.** Each cultist requires 1 unit of stock worth of food per day to avoid starvation after the rite. Essentially, food represents a kind of "extra life" in Chapter II.
- **Salvage.** Salvage represents a variety of nonmagical items, excluding weapons and armor: vines as rope replacement, things that lone travelers may have lost, natural resources like pitch, wood, etc. Explain to the players that this can be pretty much anything they can plausibly describe as occurring naturally in the mountains and valleys, or in abandoned mining operations. They do NOT have to describe the precise item now; they can spontaneously determine that 1 Salvage is an item when they use it.

Making Preparations

Asking for the Rite's Effects. Arios is happy to explain the rite's effects; if nobody bothers to ask him, the cultists will learn the effects when Act III starts.

Placing the Barrel and Chest. The cultists can move the barrel and chest freely on top of the spire. Once the storm starts, a cultist carrying the barrel is considered to be encumbered. The chest is too unwieldy to carry alone in combat, and requires two cultists to cooperate, both of which are considered to be encumbered.

Barrel. The barrel can hold up to 10 units of stock. The barrel has AC 10, 15 hit points and a damage threshold of 5.

Chest. The chest can hold up to 20 units of stock. The barrel has AC 10 20 hit points and a damage threshold of 5.

Any extra materials need to be carried by cultists, each taking up one of their inventory slots.

Modifying the Terrain.

Create Anchor Point. Those inside the Cocoon of Constancy are safe from the storm's gales; however, those outside of it may well be blown off the spire. Creating a makeshift piton or similar anchor to which a cultist can secure itself takes 4 hours and **2 Salvage**. A cultist anchored to a piton can't be blown off the spire while secured to it.

Fortify the Ruins. A cultist can spend 4 hours and **1 Salvage** to fortify a single 5-foot square, making it impassable. The makeshift barrier has AC 10, 20 hit points, and can alternatively be torn apart with a **DC 15 Strength check**. These barriers can also stop cultists from being blown off the spire by gales but take collision damage as usual.

Makeshift Lightning Rod. A cultist can use metal debris to create a makeshift lightning rod. Doing so takes 4 hours and **2 Salvage**. A makeshift lightning rod can be carried around, but automatically encumbers a cultist (-10 ft. movement) due to being so unwieldy. A makeshift lightning rod is automatically hit by the first *Lightning Strike* event rolled. The lightning affects the rod and everything within 5 feet of it. This destroys the rod. (Essentially, each rod acts as a one-use shield against lightning.)

Prepare a Fire. The magic of the rite of the *Cocoon of Constancy* is channeled into the fires among the ruins. Preparing a fire properly by drying wood in this clime and increasing its size takes 4 hours and **1 Salvage**. This increases the range of the ritual's effects from the fire by 5 feet. A single fire can be prepared multiple times.

Prepare a Securing Rope. A cultist can spend 4 hours and **1 Salvage** to create 15 feet worth of makeshift securing rope from vines harvested from a sheltered valley or ropes sourced from a defunct mining operation. Once created, such a rope takes up one inventory slot and can be attached to a rock or ruin as an action its action. It can be untied as an action and has 10 hit points. A proper securing rope does not run the risk of tearing when secured to an anchor point.

Rainproof Fire. A cultist can spend 4 hours and **1 Salvage** to create a makeshift roof over a fire; this prevents the fire from taking damage from rain.

Tainted Puddle. A cultist can spend 4 hours and **2 Salvage**, grinding up roots and insects into a toxic sludge. The cultist creates a toxic puddle of *Putrid Sludge* in a 5-foot square. A cultist can refill its battle aspergillum as a bonus action while in or adjacent to a puddle. A non-cultist creature that steps into or starts its turn in the sludge is automatically affected by it as if hit by *Putrid Sludge*.

Troubleshooting.

If the players don't have any ideas, feel free to nudge them in the guise of Arios making suggestions.

Once the party has finished its preparations and/or has run out of Salvage or 15 minutes have elapsed, proceed to Act III.

Scoring. If the players devise a unique idea not listed among the default uses of **Salvage** outlined above, award them **3 points**.

Encourage Creativity!

This list is not comprehensive! If the players come up with a great idea, let them do it! Similarly, combining effects in a smart manner is very much encouraged!

Any significant construction should take 4 hours; basic alterations should require **1 Salvage**, while more meaningful ones require **2 Salvage**.

During the playtest, one player stated that they had salvaged flammable materials and pitch, put it in their battle aspergillums and set it alight; I rewarded this by granting them +3 (1d6) fire damage per hit. Another player stated that they had salvaged heaps of moss, which they stuck to the fortifications and ruins to cushion the impact of being blown against them; I rewarded this by reducing collision damage against such cushioned objects by 3d6 for the cultist, but not for the barrier.

Track where the terrain modifications are placed, and make sure you track each fire's "hit points" individually (20 "hp" is the default), as *Prepare a Fire* can make an individual fire more

Act III: The Eye of Constancy

The skies darken early today; sundown is still two hours away, but the light of the sun has all but ceased penetrating the thick shroud of ink-black clouds. An apocalyptic storm of unprecedented proportions is rolling in from every cardinal direction; it seems like the very heavens have set out to crush you.

Within the soft, green glow of the cocoon of constancy, Arios and your allies are conducting the ritual; its magic has begun infusing the fires. Near the flames you can feel the power of still waters coursing through you. You know you won't have to withstand the elements for long, but withstand you must.

The clouds rush in, bringing torrential rains. The staccato of thunder and lightning illuminates the dark, as gales pummel you. As a ball of lightning crackles briefly above, you see the first bony fingers grasp the edge of the spire's ledge—they are here! You feel the power of the ritual coursing through you, green wisps fortifying your bodies—by the still waters, you can do this!

GM Note. Give the party the information regarding the Eye of Constancy if they have not already asked for it.

The Storm of the Century

The wrath conjured forth by Vasi's servants knows no bounds. It is a chaotic cacophony of howling winds, rain, thunder, and lightning.

Visibility. Dim light, except within 10 feet of the lit fires.

Strong Winds. The strong winds impose **disadvantage** on ranged weapon attack rolls and **Wisdom (Perception) checks** relying on hearing. They would usually also extinguish the fires, but the ritual keeps them lit.

Shield of Stagnation. All cultists that start outside the cocoon gain 10 temporary hit points. This benefit does not extend to replacement cultists.

Cocoon of Constancy. Arios and his flock are sheltered in a cocoon of stagnant water while they conduct the ritual to save them all. For details on the ritual see P.XX.

The cocoon has AC 10 and 77 hit points.

If it is destroyed, the ritual fails, dooming the cultists to certain death. Unless the party taps into the *Ritual Die*, the ritual will be completed at the start of the 7th round.

Fires. The fires burn in a controlled and calming manner, not in the flickering, chaotic dance one would expect. They act as a sort of relay for the ritual.

Cultists. The cultists are immune to the fires while the ritual is in progress. Any other creature that enters a fire or starts its turn in it, takes 14 (4d6) fire damage (no save).

Vasi's Creatures. The servants of Vasi instinctively know about the fire's properties and can extinguish the fires by dousing them with their bodies.

A creature of Vasi that starts its turn adjacent to a fire can use its action to sacrifice its lifeforce to douse the fires.

Each fire has "20 hp". A creature of Vasi that sacrifices itself to the fire reduces this value by its current hit points. A fire that was properly stoked with *Prepare a Fire* in Act II increases its hp by 10 for every use of *Prepare a Fire* to fortify it.

Storm Initiative. The storm "acts" twice per round, once on initiative 15, and once on initiative 5. Roll twice on the storm effect table at the start of the round. If you already rolled an effect this round, reroll.

Table: Storm Effect

D10	Effect
1	Lull. Nothing happens.
2–3	Gale. An extremely strong gale hits the entire spire horizontally from one cardinal direction (roll 1d4 : 1: North; 2: East; 3: South; 4: West). Any cultist that is not in cover from it must make a DC 15 Strength saving throw . On a failed check, the cultist is blown 60 feet in a straight line towards the direction opposite of that of the gale. If a cultist collides with a solid object, the cultist and object take 3 (1d6) bludgeoning damage per 10 feet traveled before the collision. A cultist can halve the collision damage with its choice of a successful DC 15 Dexterity (Acrobatics) check, or a DC 10 Constitution saving throw.
4–5	Cloudburst. The pouring rain worsens to a massive cloudburst, conveniently over one or more of the fires. Roll 1d6 : 1–3: One fire affected; 4–5: Two fires affected; 6: All fires affected. Unless a fire had a roof constructed above it, it automatically takes 10 "hp" damage.
6–7	Thunderclap. A deafening roar of thunder shakes the spire. All cultists must succeed on a DC 15 Constitution saving throw or be deafened. A deafened cultist can repeat this saving throw at the start of their turn; on a success, they are no longer deafened.

8–9 **Lightning Strike.** A randomly determined cultist must succeed on a **DC 15 Dexterity saving throw** or be struck by lightning, taking 28 (8d6) lightning damage, or half as much on a successful save. If a lightning rod exists, it is struck and destroyed instead.

10 **Apocalyptic Weather.** Roll twice on this table and combine the effects.

Vasi's Creatures. Vasi's servants are not directly affected by the storm's gales. Collisions and lightning affect them as usual.

Predicting the Storm. The cultists have lived atop the spire for a while; they know the terrain. As such, they may attempt to predict the weather effects of the storm. A cultist can use their action to make a **DC 10 Wisdom (Survival) check**. On a successful check, the cultist correctly predicts the actions the storm takes this round. This grants the cultist and any ally that can hear the prediction **advantage** on all saving throws and checks to resist the storm's effects. (More importantly, it allows the cultists to maneuver into more favorable positions!) Note that a deafened cultist does not understand these directions unless the player giving directions roleplays a convincing pantomime of the weather and the deafened cultist can see them.

GM Note. If the party does not realize they can predict the storm, let them know about their ability to predict the weather at the start of round 2.

Vasi's Creatures.

Determine each round with 1d4 where Vasi's creatures arrive.

Table: Point of Arrival

D4	Arrival
1	North
2	East
3	South
4	West

- Round 1. Eight lesser flowing dead, arriving in groups of four from two different points of arrival.
- Round 2. Two lesser flowing dead.
- Round 3. One weakened flow conductor.
- Round 4. Four lesser flowing dead.
- Round 5. Two lesser flowing dead and one swarm of Vasi's drops from two different points of arrival.

- Round 6. Eight lesser flowing dead, arriving in groups of four from two different points of arrival.
- Round 7 Onward. Four lesser flowing dead, arriving in groups of two from two different points of arrival.

Creature Limit. Once 15 lesser flowing dead have joined the fray, no additional undead arrive until one of them has been eliminated.

Creature Strategy. The creatures of Vasi have two primary goals: Eliminate the cultist's food supplies and destroy the *Cocoon of Constancy*. They only attack the cultists if they stand between them and these goals. Once attacked, they retaliate. If the creatures witness the ritual's energy being channeled, they start attempting to put out the fires.

Supplies. A creature that can easily reach either barrel or crate lifts it as an action; it then tries to carry the container to the spire's edge and throw it off. Vasi's creatures can carry barrel and chest the same way as cultists. If carrying the supplies fails, they start attacking the containers instead.

Cocoon. A creature attacks the cocoon, hoping to destroy it.

Cultist Replacement. If a cultist perishes, a replacement cultist is ejected from the cocoon to defend it.

If the ritual is successfully completed (the *Ritual Die* reaches 14), read:

With a flash of green energy that blasts like a pillar of hope into the sky from the cocoon, the pandemonium finally ceases. The strange creatures are frozen in their tracks for a second, then turn into a green sludge that seeps into the ground. More importantly, the raging storm finally subsides: You are standing in the perfectly calm eye of this unnatural storm, an eye you have created, surrounded by raging clouds in all directions. You can hear neither the rumble of thunder, nor the crackle of lightning; not a single drop of water falls upon you. You bask in the quiet, in the last rays of the sun, knowing that you have triumphed against all odds. Exhausted and happy, you collapse.

Scoring. Award **1 point** for every lesser flowing dead defeated. Award **5 points** if the party takes down the swarm of Vasi's drops. Award **10 points** if the cultists defeat the flow conductor. Award **4 points** for each of the 14 cultists that survived chapter one. Award up to **5 extra points** for particularly creative ways to survive.

GM Note: Reward Creativity

As any halfway experienced GM can attest by just looking at the set up, this act will kill cultists, probably a bunch of them. It can't be won by luck alone. That being said, it is possible to win with proper preparation. In my playtest, the players used the lightning rods to kill the flow conductor and the swarm. They predicted the storm's pattern, and when they knew that lightning would be coming, invoked *Blessed Constancy*, took the makeshift lightning rod, and pretty much ran at the creatures. They were blasted by lightning but survived unscathed due to the power of blessed stagnation.

Chapter Two: Quagmire in the Clepsydra

You all share the same dream. Wretched waters falling from the skies while you all were away, gathering supplies, congealing in the shape of a strange, spider-like entity the size of a grown warhorse. The spider made of water also manifested armor plates and a strange, silvery amphora.

The arachnid thing ventured below. The frightful sound of flowing water echoes from the depths; the pools of stagnant water that you need to survive have dried up. Under the perpetual sun of your eye of the storm, even the hardy plants providing your bitter berries are withering, and your sustenance-insects are deprived of their breeding grounds.

*If the storms do not subsist, you will perish.
You awaken, not to despair, but to hope.*

Last night, Arios, broken, bent over by the ritual's strain, had a vision: Vasi, goddess of water, has spoken to him from within the spire, revealing the truth of her gospel. Your salvation lies in her still waters; the flow must be quenched once more, the divine tear that rests below recovered and secured.

Arios received strange green drops as a sign of Her divine favor. He chose you to execute the goddesses will: "Secure the divine tear." He handed one of the crystallized drops to each of you, and when you touched the green, clammy surfaces, the hypothermia and pain, the desperation—your constant companions in your miserable exile—ceased, replaced with a serene calmness and determination as still as a stagnant pool of water. You understood then that the spider-thing must be stopped, and that the green tokens can help you; thus fortified, you ventured down the stairs, into that horrid creature's lair.

GREEN TOKEN OF VASI

Wondrous Item, uncommon

This drop of crystallized and still water is slimy to the touch. It seems to be hesitant to leave your hand, magically returning to it at your mental call. You can make a ranged or melee attack with a *token of Vasi* as a bonus action, or by using your reaction to something happening. You can throw the *token of Vasi* at a target or 5-foot square within 30 feet. If your target is the **spider creature**, it must succeed on a DC 15 Charisma saving throw, or suffer under the truth of your divine power. If your target is a 5-foot square, you create an area of sludge in a 10-foot cube centered on the point of impact for 1 minute. The sludge is difficult terrain for all creatures without your blessing, and any such creature ending its turn in the sludge takes 7 (2d6) acid damage. Using a *token of Vasi* consumes it.

Token of Vasi
մմճիւ ձւոյ անոթ

GM Note: On Death & Survival. The cultists that survive the first chapter are de facto immortal. Even if they perish, they awaken the next day, at 11 PM. However, they awaken hungry and thirsty.

Each remaining cultist, excluding Arios, Hyrkios and Mer'talya consumes **1 Food** per day.

A cultist who can't consume **1 Food** per day gains 1 level of exhaustion.

A cultist with exhaustion level 5 is utterly incapable of contributing, caught in an endless spiral of starvation. This is the true failstate of this second part of the adventure.

Cultist Replacement. When a cultist (temporarily) dies in the Water Clock Level, Arios knows. He sends a replacement cultist down, who arrives within 1d6 +3 rounds. He can only do this until all cultists that survived the first chapter have been sent down; after that, the cultists need to wait until 11 PM, when they reawaken.

Token Limit. Arios can only create 6 *tokens of Vasi* per day; the cultists can't brute-force this chapter by pooling 14 tokens. If a day passes and the cultists had to consume **Food** or gain exhaustion, they also gain a new array of tokens.

Troubleshooting. What if there are less cultists left after chapter one than players at the table? That'd mean that, potentially, one or more players have no "respawning" cultist.

If there is less than 1 hour of playtime left and only one player needs a cultist to play, you might consider proceeding with the remaining cultists and allow the player without a cultist to take control of Mer'talya. If more than one player has no cultist left to play. If there is more than 1 hour left, just have additional cultists arrive; they were saved by the ritual while en route to the spire. This might not be canon, but player fun is more important than canon.

Water Clock Level Dressing

Lighting: Dim lighting from phosphorescent growths.

Sounds: Rushing water.

Smells: Wet stone, delicious mold, mildew, lichen.

Pressurized Water Web. Touching the weaver's *Pressurized Water Web* affects the character as if hit by it, and alerts the **weakened flow weaver** to something triggering the web. Using a *green token of Vasi* on the web turns it into harmless sludge in the affected area and does not alert the **weakened flow weaver** in **Area 4**. The weaver replenishes all triggered webs and strands when the party takes a short or long rest, unless that would conflict with its behavior outlined in **Weaver Behavior**.

Area 1: Entrance

The smooth, steep spiral stairs lead down for 5 minutes, doubling back on themselves time and again, before opening to a 50-foot-wide vertical cylindrical chamber. The rush of flowing water echoes softly. At the bottom, a set of open double doors are held shut by a web of water.

Double Doors. The double doors are open and can be opened or closed without a sound, the hinges still perfectly functional. A **DC 10 Intelligence (Religion) check** recognizes the deity inlaid on the doors as the wrongful depiction of Vasi as a bringer of torrential floods.

Water Web. The web is a *Pressurized Water Web*.

Area 2: Grand View

The doors open to an impressive vista, a balcony overlooking a vast circular hall with 40-foot-high walls covered in faded murals that prominently feature artworks. To the left and right, a set of shallow stairs descends 15 feet down to the floor. In the middle of the hall, a 60-foot-high dome caps the center, dimly illuminated by specks of calming, green phosphorescent lichen. Directly beneath this dome is a recessed area, 5 feet lower than the floor of the hall's outer ring. Two canals, each sporting a steady, if meandering stream of knee-deep water, lead into the recessed area, which also sports a path that bisects this recessed section in an S-shape. Inside the recessed area, two drains sport growths of edible lichen that are slowly being flushed away by the remorseless flow of water.

Stairs. The shallow stairs descend to the floor of the main chamber **Area 3**.

Pressurized Web Trip Wire. Hidden in the gloom on both sides of the stairs, the weakened flow weaver has left a strand of its *Pressurized Water Web*, vanishing in a crack in the wall. It takes a **DC 15 Wisdom (Perception) check** from afar, or a **DC 10 Intelligence (Investigation) check** while slowly walking down the stairs to notice it. Once noticed, it's easy to step over it. Touching the web snaps the strand and smashes the character into the wall for 3 (1d6) bludgeoning damage. This also alerts the **weakened flow weaver** in **Area 4** to the presence of intruders.

Area 3 The Great Clepsydra Table

The vast circular hall is wondrous, but foreboding, testament to the miracles of an age long past. The calming effect of the phosphorescent lichen and its dim, yellow-green radiance is only slightly spoiled by the presence of the murals on the wall and the misguided horrors they depict. Clearly, the ancients failed to understand the truth of Still Waters.

The winding path through the recessed area is visibly damp, the life-giving lichen being slowly scoured away by twisted streams of sputtering water that make you recall all you've lost.

A 5-foot-wide canal leads off into the darkness in each of the recessed area's separated chambers. Horrid streams emerge from the canals with the inexorable mercilessness of entropy.

In the South, stairs mirror those in the North, save that they lead further down.

Outer Ring—Murals. A variety of blasphemous murals can be found among the wave-patterns in the walls. There is one sequence of murals in each cardinal direction.

Mural Sequence (North)—Warrior's Rest. This sequence of murals depicts ancient warriors being turned into immortal guardians after death. Some ancients indubitably were on the way to the enlightenment of Still Waters.

Wall Painting Sequence (East)—Great Clepsydra. This sequence shows how the ancients created this horrid place and brought death and floods to the lands by abusing Vasi's gifts. The deity cried, but the ancient heretics simply used the divine tears to power their conquests, the grotesque mockery of her will that you stand in right now.

Wall Painting Sequence (South)—Vasi's Servants. This sequence shows the horrible servants of the twisted doctrine once taught here, including a depiction of the spider-monster that is currently trying to destroy the nascent Church of Still Waters.

Wall Painting Sequence (West)—Sacred Amphora of Restoration. This sequence shows a twisted inversion of the truth and depicts the spider monster and its silver amphora as bringing salvation, rather than death.

Recessed Area—Drains. Each side of the center section has a drain from which life-giving lichen and algae grow; these are currently being torn away by the steady streams of water from the channels. Five feet below the ground, a metal grating of invulnerable, bronze-like ore blocks further passage.

Recessed Area—Western Channel. A steady stream of 1-foot-high water flows from this channel, and into the drain. The water is clear, concealing a *Pressurized Web Trip Wire* (see **Area 2**). Since the web is made of water, it is almost invisible. It takes a **DC 20 Wisdom (Perception) check** to notice it, or a **DC 15 Intelligence (Investigation) check** when explicitly looking at the water. Stating that one looks for strands of the web provides **advantage** on the check, and **reduces the DC by 5**.

Recessed Area—Eastern Channel. A steady stream of slowly rising water flows from this channel, and into the drain. Every 5 minutes, the water changes from being crystal clear, to slimy muck, and back again. While stagnant muck meanders, the overall water level slowly decreases. The water conceals a *Pressurized Web Trip Wire* (see **Area 2**). While the water is clear, the strand behaves like in the western channel, but while the muck is flowing, the clear transparent web is easy to spot. It takes only a **DC 15 Wisdom (Perception) check** to notice it in muck, and characters automatically notice it if they look for it.

Stagnant Muck. The **weakened flow weaver** takes 3 (1d6) acid damage if it ends its turn in muck. The characters, chosen by *stagnation*, do not take damage.

Area 4: Western Cistern

The claustrophobic tunnel's winding path leads to a 40-foot-diameter, circular chamber with a 45-foot ceiling above. The floor's center sports a grating of bronze-like metal with 6-inch gaps. The channel's water emerges slowly from the grating. From the ceiling dangles a silver chain that splits into three intricate parts holding a silver urn 10 feet above the floor. An intricate web of clean, pressurized web holds a silvery amphora in place above the urn.

Western Urn. The chain holding the urn is blessed by Vasi and both it and the urn it holds are impossible to damage by mortals. The urn currently holds a steadily overflowing stream of clear water from the amphora and the **weakened flow weaver** but is clearly intended to hold something larger. While both the amphora and the weaver pour

water in it, clear water flows through the western channel. As soon as the **weakened flow weaver** does anything except focus on this task, the flow of water ceases.

Water Web. The web is a *Pressurized Water Web*. Dissolving the web makes the amphora fall to the ground and alerts the **weakened flow weaver**.

Area 5: Eastern Cistern

The tunnel's winding path leads to a 40-foot-diameter, circular chamber with a 45-foot ceiling above. The floor's center sports a grating of bronze-like metal with 6-inch gaps. The channel's water/muck emerges slowly from the grating. From the ceiling dangles a silver chain that splits into three intricate parts holding a silver urn 10 feet above the floor. The urn holds a globe of water suspended in a smooth, clear material that is 1 foot in diameter and emits soft light in a 5-foot radius. The globe is held in place by water webs.

Eastern Urn. The chain holding the urn is blessed by Vasi and both it and the urn it holds are impossible to damage by mortals. The urn currently holds a *tear of Vasi* that oscillates every 5 minutes between its clear, blue state, and a tainted, green form. The liquid flowing from the grating depends on the *tear of Vasi's* current state. The stream of liquid, whether clear water, or muck (see **Area 3**), ends when the *tear of Vasi* is removed from the urn.

Water Web. The web is a *Pressurized Water Web*. Dissolving the web makes it possible to retrieve the *tear of Vasi* and alerts the **weakened flow weaver**.

Area 6: Southern Stairs

A set of shallow stairs mirrors the steps to the north that you used to enter this place but goes down 15 feet instead before ending at a set of closed double doors depicting a female figure. The double doors are held shut by a web of pressurized water. A curious, black lichen sporting purple algal blossoms and glistening, black seeds is growing here. It smells like candied rose petals.

Double Doors. These doors are identical to the ones leading from **Area 1** to **Area 2**.

Flowering Lichen. The black lichen is blessed by the same entity that granted Arios his vision. Harvesting a handful of seeds is an action, as is consuming them. A total of six handfuls of seeds can be harvested from the lichen per day. Each handful of seeds heals the characters for 1d6 + 2 hp. A

DC 10 Intelligence (Nature) or Wisdom (Survival) check knows that these seeds are usually dangerous, but that the true chosen of Vasi's have nothing to fear from them.

Water Web. The web is a *Pressurized Water Web*.

Area 7: Blocked Passage

Beyond the doors lies a 50-foot-wide circular chamber, dominated by narrow stairs.

On the wall next to the entrance, you can see an intricate mural that depicts a stylized version of the massive spire and a sprawling complex inside, as well as two ravaging rivers emerging from the spire, sending forth their deadly floods. You shudder at the thought of the devastation they have wrought.

The passage down is blocked by a massive collapse.

Collapse. The collapse is massive, and any character with *Stonecunning*, **DC 10 Intelligence (History)** or **Intelligence (Investigation) check** can tell that it is structurally stable, but impossible to remove without whole teams working for months on end.

Mural. The mural depicts a massive complex inside the spire. Parts of the mural have been damaged by the collapse, but what remains clearly visible are two rivers springing forth from below the ground on opposite sides of the spire.

Blessed By Stagnation

If the entire party dies, they awake on the top of Rultmoork's spire at 11 PM, unharmed, with Arios looking concerned and providing hints, if required. He hands them another *green token of Vasi* each and sends them back down.

Weaver Behavior

Flooding. The **weakened flow weaver** panics when one of the strands in the eastern or western channel (**Area 3**) is triggered, or when it notices that its webs in the eastern (**Area 5**) or western cistern (**Area 4**) have been destroyed in its absence. Provided it still has access to either the *tear of Vasi* or the *sacred amphora of restoration*, it returns to the respective relic and sacrifices part of its lifeforce to supercharge the item, gaining one level of exhaustion. This starts flooding of the Water Clock Level; the water starts audibly rising at a rate of 1 foot every 2 rounds. Once 10 rounds have elapsed, the water turns into a churning

chaos and stays that way for 5 minutes. The churning waters require a **DC 15 Strength (Athletics) check** to avoid being submerged and smashed against walls or ground for 7 (2d6) bludgeoning damage. Allow a party caught by the flooding a **DC 10 Wisdom or Intelligence check** that they can sit out the flooding on the stairs in **Area 1**. Since neither of the drains of the Great Clepsydra are clogged, the water levels drop rapidly, at a rate of 5 feet per round.

Flow Weaver Alerted. When a strand or web of its *Pressurized Water Web* is touched, the **weakened flow weaver** in **Area 4** uses its *Earth Glide* to enter one of the cracks in the complex and investigate. It reaches another **Area** of the Water Clock Level in 1d3 + 2 rounds, twice that long once it has two levels of exhaustion.

Flow Weaver Concerned. If the **weakened flow weaver** notices that the eastern channel in **Area 3** does not carry water anymore, it settles in **Area 1** and tries to cut off the exit until it can reclaim the *tear of Vasi*.

Flow Weaver Unaware. If the **weakened flow weaver** has not been alerted, it remains in its web in **Area 4**, pouring a stream of the water that forms its body into the urn. It is hostile, but unless the party has not secured the *tear of Vasi*, it only stays away from **Area 4** for up to 5 minutes before returning.

Besting the Weaver

Combat. Even a weakened flow weaver is an enemy that might be beyond the party to defeat in combat. It's possible, but difficult.

Trickery. Splitting the party, luring the weaver away by deliberately triggering a web, and then absconding with the *tear of Vasi* is the easiest way to victory.

Scoring. Killing the weakened flow weaver grants the party **10 points**. Outwitting it and absconding with the *tear of Vasi* without killing it grants the party **15 points**. The party also gets **5 points** for every cultist that survived, and loses **one point** for every level of exhaustion due to starvation they incurred.

Epilogue

Once the party returns the *tear of Vasi* to Arios, he murmurs a prayer, his eyes flash: the divine tear turns still, stagnant, green. With an epic shuddering of magical force, the perpetual storms that trapped the cultists dissipate, leaving only still air. The **weakened flow weaver**, if still alive, emerges green and stagnant, now subservient to Arios. It hands over the silver amphora if the cultists have not already done so.

Arios leads his flock ceremoniously into the Water Clock and dumps the silver amphora in the western drain in **Area 3**. After that, he removes one disc of his amulet, throwing it in the cult's fire pit while keeping the amulet. The cultists bury the stairs leading down as anathema, and as the last handful of dirt falls, they all hear a female voice echoing through their minds:

"I am Rultmoork, forevermore...and now, so art thee."

Appendix: Ritual—The Eye of Constancy

This ritual is conducted by Arios, Hyrkios, Mer'talya, and all cultists that do not defend them while doing so.

Cocoon of Constancy. The ritualists are shrouded in the Cocoon of Constancy while performing it.

The cocoon has AC 10 and 77 hit points.

If the cocoon is destroyed, the ritual fails and must be started anew.

Ritual Die & Power Increase. Put a d20 on the table at the start of the first round, with the number "2" facing up; this is the *Ritual Die*. At the start of each subsequent round, the *Ritual Die* increases by 2. Once it has reached 14, the ritual is successful. If the die would reach a value of 0 due to Beseech Arios options (see below), the ritual fails.

Benefits to Cultists. While the ritual is in progress, each cultist outside the cocoon can tap into the power of the ritual. A cultist that starts its turn within 10 feet of the Cocoon of Constancy, or within the range of the signal fires, gains 1 charge. A cultist can only hold one charge. Each of the following abilities consumes the charge.

- **Bless Sludge.** The cultist channels Arios' blessing as a bonus action. This doubles the damage dealt by *Putrid Sludge* until the start of the cultist's next turn, to 10 (4d4) poison damage.
- **Constancy's Command.** As a reaction to seeing a creature sprayed with *Putrid Sludge*, the cultist can command it to cease moving. The creature must make its choice of a DC 16 Strength or Charisma saving throw, or become paralyzed. The creature can repeat this saving throw at the end of each of its turns, ending the effect on a successful save.
- **Fortify Form.** As a reaction to taking damage, the cultist can roll 3d4 and subtract the result from the damage taken.
- **Recall State.** As a bonus action, the cultist regains 3d4 +2 hit points.
- **Sludge Refill.** As a bonus action the cultist can regain all 3 uses of *Putrid Sludge*.

- **Stand Against the Gales.** As a bonus action, the cultist can fortify itself against the gales. They gain advantage on checks to avoid being blown away by the sudden gales.

Beseech Arios. A cultist can use a reaction to rolling a saving throw or taking damage, or a bonus action to beseech Arios to gain one of the following benefits.

However, this intervention comes at a price. Each of these effects reduces the number shown by the *Ritual Die* by 1. Arios can only intervene this way three times per round.

- **Blessed Constancy.** The cultist's hit points are locked until the start of their next turn. Any damage the cultist takes is reduced to 0.
- **Prophet's Smite.** The cultist gets a bonus equal to 20 minus the number shown by the *Ritual Die* after activating this ability to its next attack roll and deals additional bludgeoning damage on a hit equal to twice this bonus to the attack roll.
- **Shelter from the Storm.** The cultist becomes **immune** to all effects of the storm until the start of the cultist's next turn.
- **Surge of Stagnant Waters.** The cultist summons a geyser of corrosive stagnation at a point within 60 feet. Each creature within a 10-foot-radius, 40-foot-high cylinder must make a **DC 16 Dexterity saving throw**. On a failed save, a creature takes 14 (4d6) acid damage and 15 (4d6) poison damage, or half as much on a successful save. The poison damage bypasses the poison immunity of Vasi's creatures.

GM Note. Hand out the *green tokens* to the players to represent charges, and collect them again when they use them.

Lesser Flowing Dead

Medium Undead, typically Neutral

Medium Undead, typically Neutral

Armor Class 13 (flowing water and armor scraps)

Hit Points 15 (2d8 + 6)

STR	DEX	CON	INT	WIS	CHA
16 (+3)	14 (+2)	16 (+3)	6 (-2)	6 (-2)	5 (-3)

Damage Vulnerabilities bludgeoning, fire, necrotic, special (see Stagnation Vulnerability)

Damage Resistances radiant

Damage Immunities poison

Condition Immunities exhaustion, poisoned

Senses darkvision 60 ft., passive Perception 8

Languages understands Grekian but can't speak

Challenge 1/2 (100 XP) **Proficiency Bonus** +2

Special Traits

Stagnation Vulnerability. Flowing dead are animated by the momentum of their water. If a flowing dead does not move at least 20 ft. on its turn, it suffers disadvantage on all attack rolls, checks and saving throws. If a flowing dead starts its turn prone, it takes 10 (3d6) force damage. Additionally, they are vulnerable to the poison damage dealt by *Putrid Sludge*.

ACTIONS

Great Battle Aspergillum. *Melee Weapon Attack:* +5 to hit, reach 10 ft., one target. *Hit:* 8 (1d10 +3) bludgeoning damage, and the target must succeed on a DC 12 Dexterity saving throw or be splashed with holy water. Holy water deals 7 (2d6) radiant damage to undead and fiends. On a successful save, the target is not sprayed.

Swarm of Vasi's Drops

Medium Swarm of Tiny Oozes, typically Neutral Evil

Armor Class 15 (natural armor)

Hit Points 30 (4d8 + 12)

Speed 40 ft; swim 40 ft.

STR	DEX	CON	INT	WIS	CHA
2 (-4)	17 (+3)	16 (+3)	6 (-2)	12 (+1)	3 (-4)

Damage Resistances acid, bludgeoning, piercing, and slashing

Damage Immunities poison

Condition Immunities charmed, paralyzed, petrified, poisoned, prone, restrained, stunned

Senses blindsight 30 ft. (blind beyond this radius), passive Perception 11

Languages understands Aquan and Grekian, but can't speak

Challenge 3 (700 XP) **Proficiency Bonus** +2

SPECIAL TRAITS

Amorphous. The drops can move through a space as narrow as 1 inch wide without squeezing.

Swarm. The drops can occupy another creature's space and vice versa, and the drops can move through any opening large enough for a Tiny creature. The drops can't regain hp or gain temporary hp.

ACTIONS

Bites. *Melee Weapon Attack:* +5 to hit, reach 0 ft., one creature in the swarm's space. *Hit:* 14 (4d6) bludgeoning damage, or 7 (2d6) bludgeoning damage if the swarm has half of its hit points or fewer.

Weakened Flow Conductor

Large Elemental, typically Neutral

Armor Class 14

Hit Points 68 (8d10 + 24)

Speed 30 ft., fly 30 ft. (hover), swim 60 ft.

STR	DEX	CON	INT	WIS	CHA
10 (–)	18 (+4)	16 (+3)	10 (+0)	10 (+0)	8 (–1)

Skills Perception +2

Condition Immunities blinded, charmed, deafened, frightened, prone

Senses blindsight 60 ft. (blind beyond this radius), passive Perception 12

Languages Aquan; understands Grekian, but can't speak it

Challenge 3 (700 XP)

Proficiency Bonus +2

SPECIAL TRAITS

Amorphous. The flow conductor can move through a space as narrow as 1 inch wide without squeezing.

Weakened by Ritual. The flow conductor has lost its usual immunities and resistances due to the ritual's energies.

Ride the Storm. The rainstorm allows the weakened conductor to ride the raindrops, increasing its fly speed to 30 ft., but only while 5 feet from solid ground.

Feed Score. The flow conductor usually begins combat with a feed score of 2. The flow conductor can't have a feed score higher than 5, and its feed score reduces by 1 each time it finishes a long rest. This resource powers the conductor's reactions.

Flow Aura. A creature that starts its turn within a 10-foot-diameter sphere centered on the flow conductor must succeed on a DC 13 Strength saving throw. On a failed save, the conductor's water, infused with violent momentum, sticks to the creature and forces it to move at least 20 feet at the start of its next turn. If the creature does not move at least 20 feet, it takes 14 (4d6) bludgeoning damage from the water sticking to the target, as it discharges a hydraulic blast of water.

Flow Consumption. The flow conductor sustains itself by movement. Each time a creature takes the Dash, Disengage, or Dodge action in the conductor's flow aura, it regains 5 hp and increases its feed score by 1.

ACTIONS

Multiattack. The flow conductor makes two tendril attacks.

Tendril. *Melee Weapon Attack:* +6 to hit, reach 5 ft., one target. *Hit:* 13 (2d8 + 4) bludgeoning damage, and the target must succeed on a saving throw against the conductor's flow aura.

REACTIONS

Conduct Battle. The flow conductor's tendrils twitch when a creature within 30 feet of it does not try to move at least 10 feet during its turn. The flow conductor reduces its feed score by 1, and exchanges the positions of two creatures that it can see and both of which are within 60 feet of it. This is a teleportation effect. The conductor can only use this reaction if it has a feed score greater than 0.

Flow Conductor
alad, p. 11, 12, 13, 14, 15

Weakened Flow Weaver

Large Elemental, typically Neutral

Armor Class 14 (Grekian plates)

Hit Points 37 (5d10 + 10)

Speed 30 ft., burrow 30 ft., climb 30 ft., swim 60 ft.

STR	DEX	CON	INT	WIS	CHA
15 (+2)	16 (+3)	14 (+2)	10 (+0)	14 (+2)	12 (+1)

Skills Stealth +5

Damage Immunities poison, radiant

Condition Immunities petrified,
poisoned, prone, unconscious

Senses darkvision 60 ft., passive Perception 12

Languages Aquan, Terran understands

Grekian but can't speak it

Challenge 3 (700 XP)

Proficiency Bonus +2

SPECIAL TRAITS

Breathless. The flow weaver does not need to breathe.

Semi-Liquid Form. The flow weaver can enter a hostile creature's space and stop there. It can move through a space as narrow as 3 inches without squeezing, or sans armor plates, as narrow as 1 inch without squeezing.

Spider Climb. The flow weaver can climb difficult surfaces, including upside down on ceilings, without needing to make an ability check.

Stagnation Resistance. The weakened flow weaver is attuned to both the *tear of Vasi* and the *sacred amphora of restoration*. This has granted it an uncommon resistance to green tokens of Vasi. When it fails a saving throw against a token, it does not change into *stagnation mode*, but instead only partially turns green and gains one level of exhaustion. If it gains exhaustion level 6 this way, it turns into *stagnation mode*, loses all exhaustion levels, and ceases hostility.

Water Sense. While in contact with a body of water or one of its webs, the flow weaver knows the exact location of any other creature in contact with the same body of water or web.

Web Walker. The flow weaver ignores movement restrictions caused by webbing.

ACTIONS

Bite. *Melee Weapon Attack:* +4 to hit, reach 5 ft., one creature. *Hit:* 7 (1d10 + 2) piercing damage, plus the target must make a DC 12 Constitution saving throw, or be moved up to 10 feet in a direction of the weaver's choice. If the target collides with a solid object or another creature, all creatures involved in the collision must make a DC 12 Constitution saving throw, taking 7 (2d6) bludgeoning damage, or half as much on a successful save.

Pressurized Water Web (Recharge 4–6). *Ranged Weapon Attack:* +5 to hit, range 30/60 ft., one Large or smaller creature. *Hit:* The creature is restrained by the webbing. A target that begins its turn restrained by the web takes 7 (2d6) bludgeoning damage, and is moved up to 10 feet in a direction of the weaver's choice within the web. If the target was hit by a pressurized water web attack, the flow weaver can move it towards itself in a straight line, or push it away in a straight line. A webbed target can make a DC 14 Strength check, escaping the webbing on a success.

The webbing is made of pressurized water, has AC 10, 5 hit points, resistance to bludgeoning, and immunity to piercing, slashing, acid, poison and psychic damage.

Special Traits

Evasion. When the cultist is subjected to an effect that allows it to make a Dexterity saving throw to take only half damage, it instead takes no damage if it succeeds on the saving throw, and only half damage if it fails.

Inventory. The cultist has 3 inventory slots. ☐ ☐ ☐

Putrid Sludge. Putrid sludge deals 5 (2d4) poison damage. Each cultist has enough sludge for 3 successful attacks in their battle aspergillum.

Actions

Battle Aspergillum. *Melee Weapon Attack:* +2 to hit, reach 5 ft., one creature. *Hit:* 3 (1d6) bludgeoning damage, and the target must succeed on a DC 13 Dexterity saving throw or be splashed with **Putrid Sludge**.

Sling. *Ranged Weapon Attack:* +6 to hit, range 30/120 ft., one creature. *Hit:* 6 (1d4 + 4) bludgeoning damage.

Exhaustion Tracker: ☐ ☐ ☐ ☐ ☐

Cultist Tracker

The players take control of these cultists—all 14 of them. They only control up to six cultists at a given time in combat, but ultimately have 14 at their disposal.

A player chooses which of the three cultist types they wish to control, although a group of players can't choose more than 5 cultists of a single type during this adventure.

Cultists are not as powerful as adventurers; as such, clever roleplay is required to triumph in this adventure.

It should be noted that the death of multiple cultists is extremely likely.
